

## Civil Engineer

### About Skyray

Founded by Everoze, Skyray provides design and engineering services for great solar PV projects.

We do so for leading owners, developers and EPCs.

Our focus is on large scale ground-mounted solar PV (including new build solar-storage) and commercial rooftop.

Skyray is based in Lyon (Fr) but we are an international company, with customers and experts in several European countries.

We are hiring a senior civil engineer based in Lyon.

This is an opportunity to be at the beginning of an exciting new company within the solar PV sector – one backed with the track record, brand and network of Everoze. As an early recruit you will naturally be given opportunities and responsibilities that other larger companies would be unable to offer.

### Job description

We're looking for a talented civil engineer to join our team. You will work on civil engineering issues (geotechnical, foundations, structures, etc.) related to PV power plant projects (ground-mounted and rooftops) at different stages of development. From preliminary design to commissioning.

As a specialist, you will be in charge of design, sizing and control for the civil engineering components of a PV project. You will work both in the development phase (preliminary/feasibility study, pre project), construction (site monitoring) and potentially operational phase (reviewing and addressing issues).

You will participate in the development of Skyray's expertise by training engineers working in this field of activity.

As part of your job, you will also be asked to manage PV projects and supervise project teams (design engineers, expert engineers, cad designers). You will be responsible for technical, contractual and financial aspects related to the project and you will manage customers relations.

You will report to the technical director.

### Why Skyray ?

Come join a brand new team, passionate and motivated to (re)define the performance and quality standards of the solar PV (including solar storage) sector.

You'll be able to rely on Skyray experts and Everoze group. We'll be there to support you in your progress, and we look forward to continue learning on your side.

You'll arrive into dynamic, exciting and growing company. You'll see that we are always looking for optimization, and the best use of new tech to benefit from latest technologies (apps & data analysis, specific softwares, ...)

### Your Experience

Civil engineer or equivalent (INSA, ESTP, ENTPE...), you have at least 5 years of experience in engineering or construction follow up.

You are customer focused, rigorous, with strong analysis skills.

You have strong project management skills and enjoy working as part of a team. Regular travel both in France and internationally are expected. Driving licence required.

You have a good English level with very good interpersonal skills.

**YOU MUST HAVE A VALID PERMIT TO WORK IN EU or UK**
